
Instructions for Test Console Setup (Windows):

Pre-requisites:

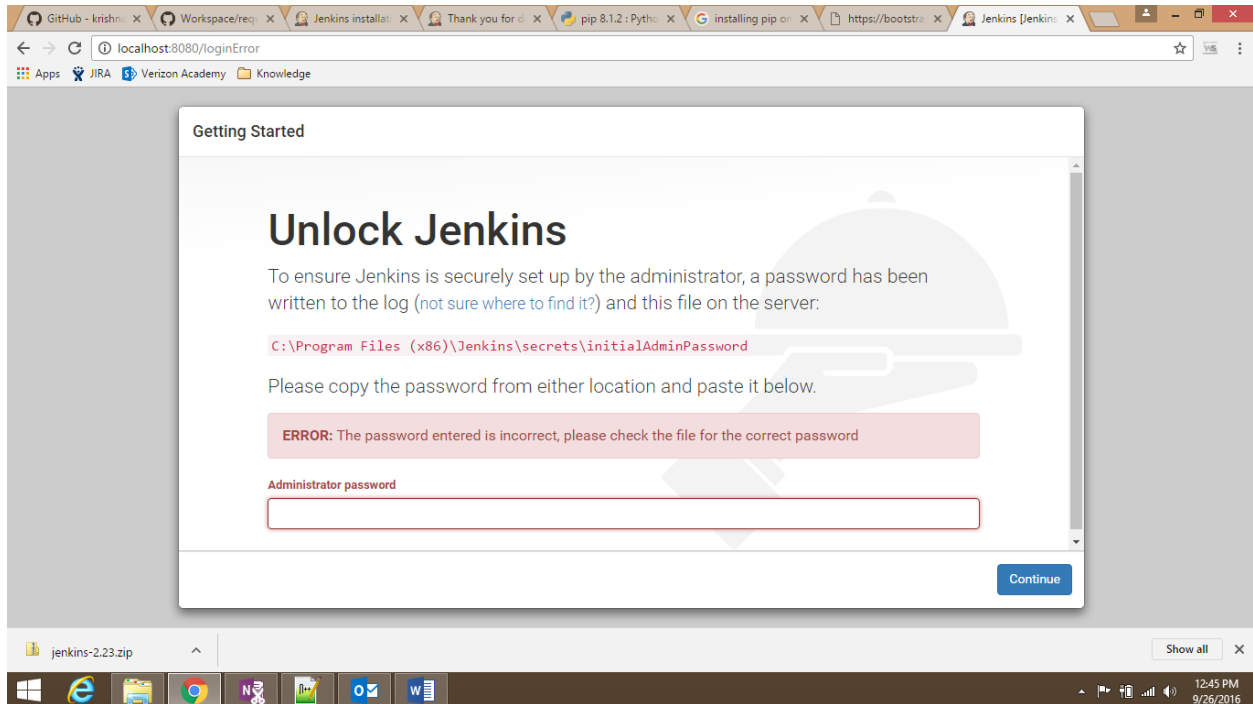

- Jenkins
- Python
- PIP
- GIT
- Virtual Environment

Jenkins:

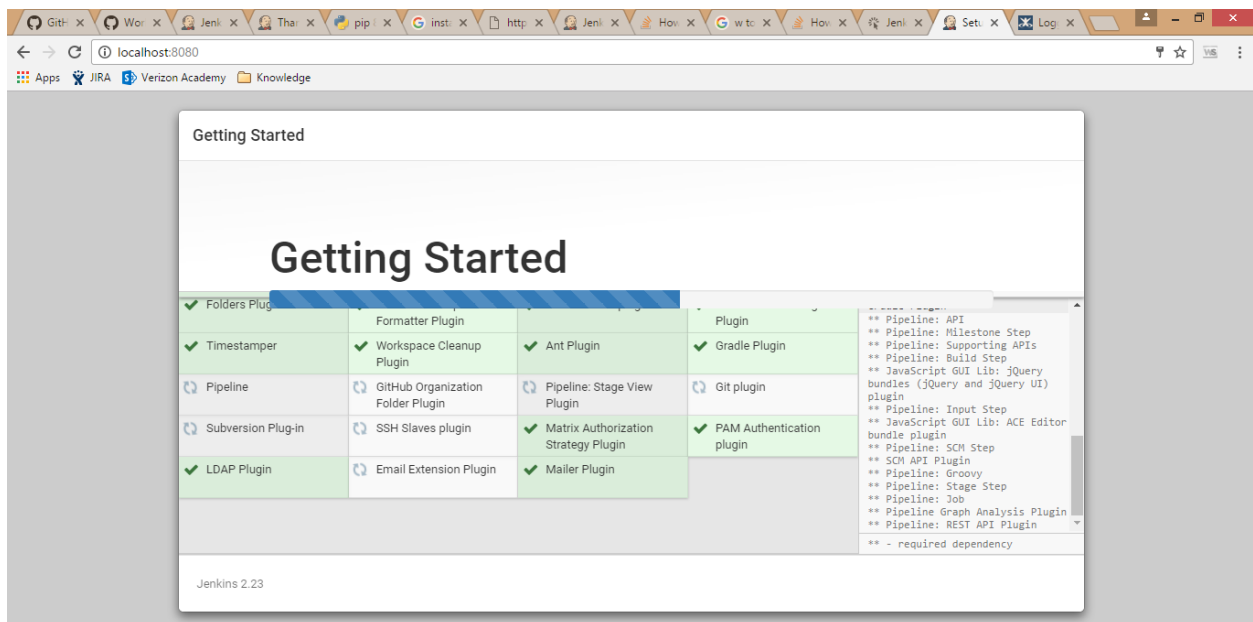

- Download the installer from link <https://jenkins.io/content/thank-you-downloading-windows-installer/>.
 - * Here we are downloading version 2.23
- Run the installer using admin access.

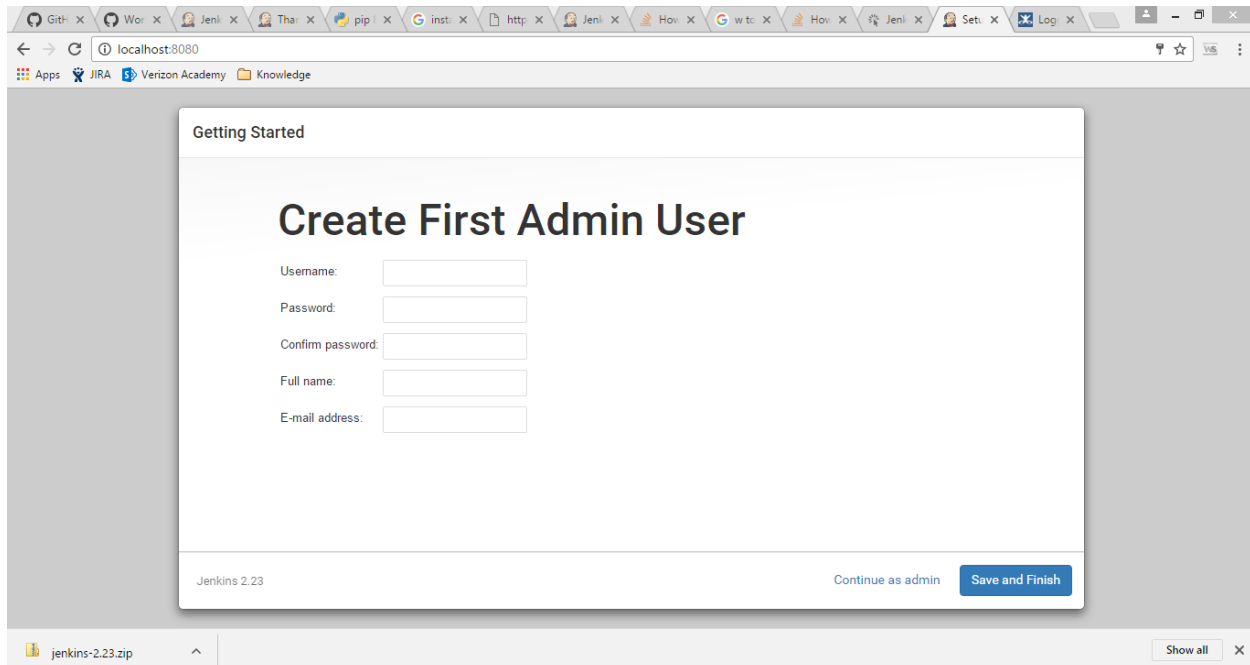

- Link on the finish button.
- User will be prompted for Admin password. Please note this is not the same password as computed password.

- Open with notepad below path-
C:\Program Files (x86)\Jenkins\secrets\initialAdminPassword
- Copy the text and enter in administrator password, then hit continue.
- Select the first option in the window "Install Plugins". Then plugin will start downloading as below screen.

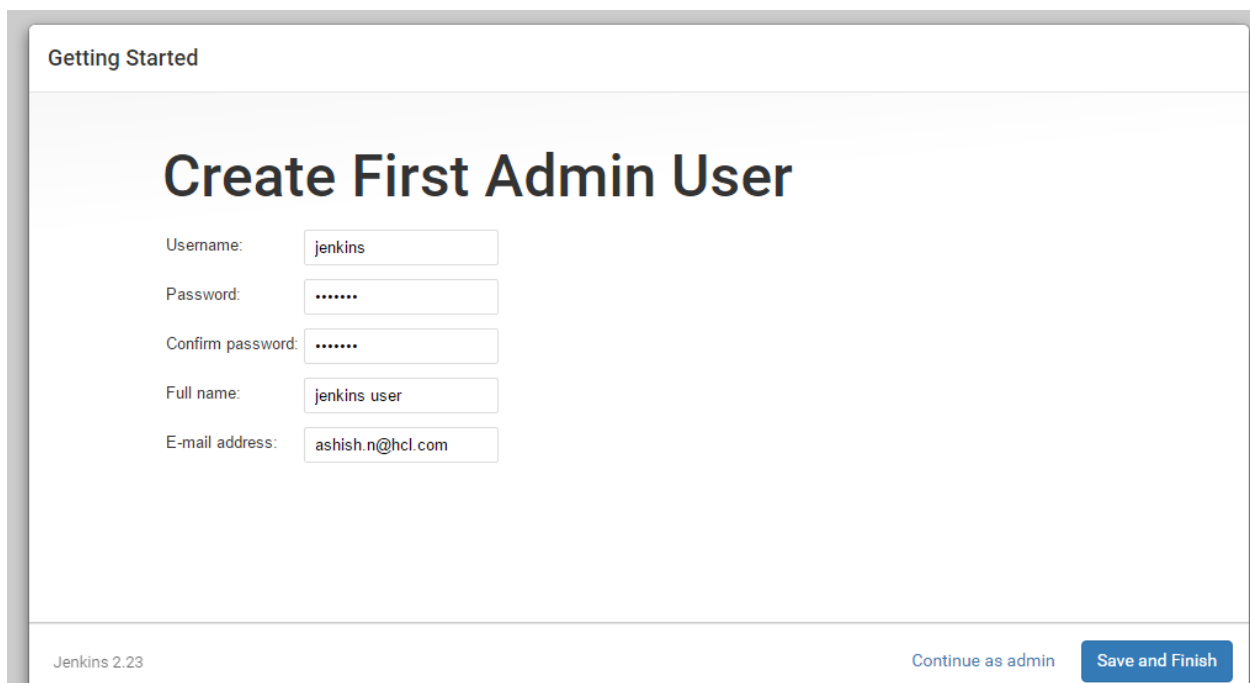

- Let the download finish.
- The next screen will prompt for Admin user creation.

The screenshot shows a web browser window with the address bar set to localhost:8080. The page title is 'Getting Started'. The main heading is 'Create First Admin User'. Below the heading are five input fields: Username, Password, Confirm password, Full name, and E-mail address. At the bottom of the form, there are two buttons: 'Continue as admin' and 'Save and Finish'. The version 'Jenkins 2.23' is displayed in the bottom left corner of the form area.

- Enter the details and “continue as admin”

The screenshot shows the same 'Getting Started' page as before, but with the form fields filled out. The Username is 'jenkins', Password is masked with dots, Confirm password is masked with dots, Full name is 'jenkins user', and E-mail address is 'ashish.n@hcl.com'. The 'Continue as admin' button is now highlighted in blue, and the 'Save and Finish' button is also highlighted in blue. The version 'Jenkins 2.23' is displayed in the bottom left corner of the form area.

Getting Started

Jenkins is ready!

You've skipped creating an admin user. To log in, use the username: 'admin' and the administrator password you used to access the setup wizard.

Your Jenkins setup is complete.

[Start using Jenkins](#)

- The Jenkins is setup successfully. Click “Start using Jenkins” for confirmation. It will redirect to Jenkins page.

Note: We have to create a job manually, If jenkins is already installed. Name the job as sample, since it is the default job specified in our code. The following steps will help in creating a job.

- Create a new job by clicking on create new jobs

Welcome to Jenkins!

Please **create new jobs** to get started.

- Enter the item name as sample, and click on Freestyle project and then click ok.

Jenkins >

Enter an item name

Required field

Freestyle project

This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.

Pipeline

Orchestrates long-running activities that can span multiple build slaves. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

External Job

This type of job allows you to record the execution of a process run outside Jenkins, even on a remote machine. This is designed so that you can use Jenkins as a dashboard of your existing automation system.

Multi-configuration project

Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

Folder

Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

Organization

Creates a GitHub organization (or user account) for all repositories matching some defined markers.

OK

- It will direct to this page. Under 'Build', click on 'Add build step' and then click on 'Execute shell' and then click on 'Apply' and 'Save'.

Build Environment

- ☐ Delete workspace before build starts
- ☐ Abort the build if it's stuck
- ☐ Add timestamps to the Console Output
- ☐ Use secret text(s) or file(s)

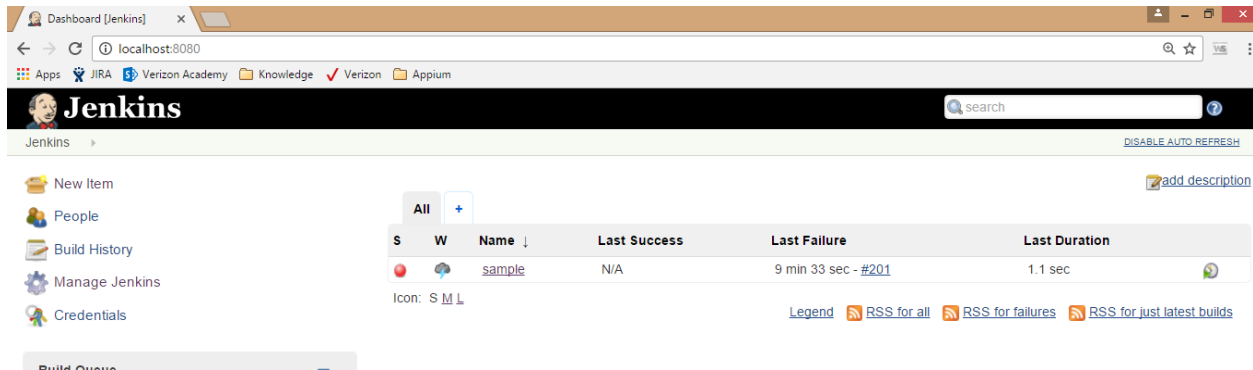

Build

Add build step ▼

- Execute Windows batch command
- Execute shell
- Invoke Ant
- Invoke Gradle script
- Invoke top-level Maven targets
- Set build status to "pending" on GitHub commit

Save Apply

- Now we can see the created job 'sample' on the Jenkins dashboard.

*****Please note in case the User and Password is not working in Jenkins, please use below steps to bypass Username and Password. *****

- Go to C:\Program Files (x86)\Jenkins\config.xml
- Change the value

```
<useSecurity>true</useSecurity>
```

```
to <useSecurity>>false</useSecurity>
```

and save.

- Go to services by entering "services.msc" in Run.

- Restart the Jenkin service.
- Open Jenkin in browser (http://localhost:8080/), and this time it should not ask for Username and Password anymore.

Please note in case the username and password are bypassed change the below line of code in view.py file (...\\Workspace\\app\\view.py)

```
j = jenkins.Jenkins('http://localhost:8080', 'jenkins', 'jenkins123')
```

```
to j = jenkins.Jenkins('http://localhost:8080')
```

Install Python Plugin

- Go to Jenkin's menu
- Select Manage Plugin
- Search for "Python Plugin"

The screenshot shows the Jenkins Update Center interface in a web browser. The browser tabs are 'Update Center [Jenkins]' and 'Python Plugin - Jenkins'. The address bar shows 'localhost:8080/updateCenter/'. The Jenkins logo and 'ENABLE AUTO REFRESH' link are at the top left. A search bar is at the top right. The left sidebar has links for 'Jenkins', 'Update center', and 'Manage Plugins'. A red banner at the top right says 'Jenkins is going to shut down'. The main content area is titled 'Installing Plugins/Upgrades' and shows the installation progress for the Python Plugin. The progress bar is yellow, indicating it is downloading. Below the progress bar, it says 'Downloaded Successfully. Will be activated during the next boot'. The 'Restarting Jenkins' status is 'Running'. At the bottom, there are two green arrows: one pointing to 'Go back to the top page (you can start using the installed plugins right away)' and another pointing to a checked checkbox 'Restart Jenkins when installation is complete and no jobs are running'.

Update Center [Jenkins] Python Plugin - Jenkins

Jenkins is going to shut down

Installing Plugins/Upgrades

Preparation

- Checking internet connectivity
- Checking update center connectivity
- Success

Python Plugin

Downloaded Successfully. Will be activated during the next boot

Restarting Jenkins

Running

Go back to the top page
(you can start using the installed plugins right away)

☒ Restart Jenkins when installation is complete and no jobs are running

Python (2.7.12):

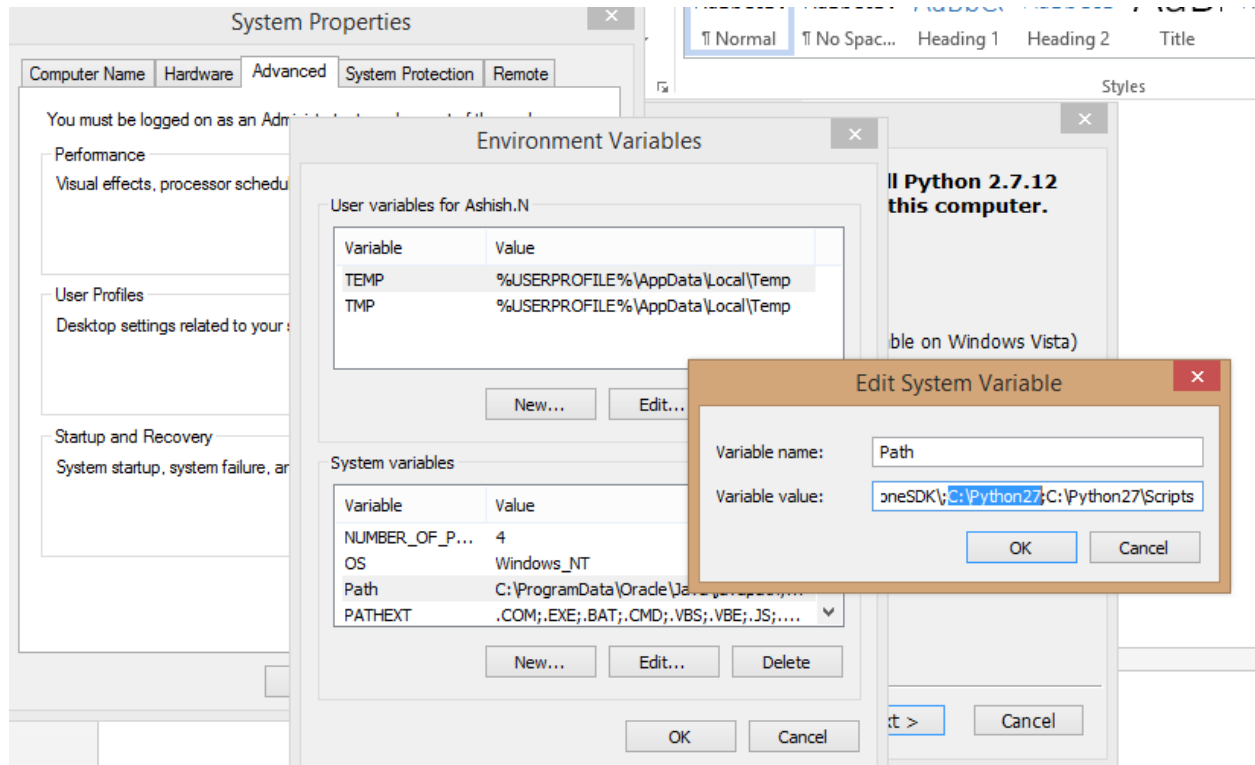

- Click on the below link for Python installation -

[Windows x86-64 MSI installer](#)

- Run the downloaded python-2.7.12.amd64.exe

- Once the installation is completed successfully update the environment variable as below.

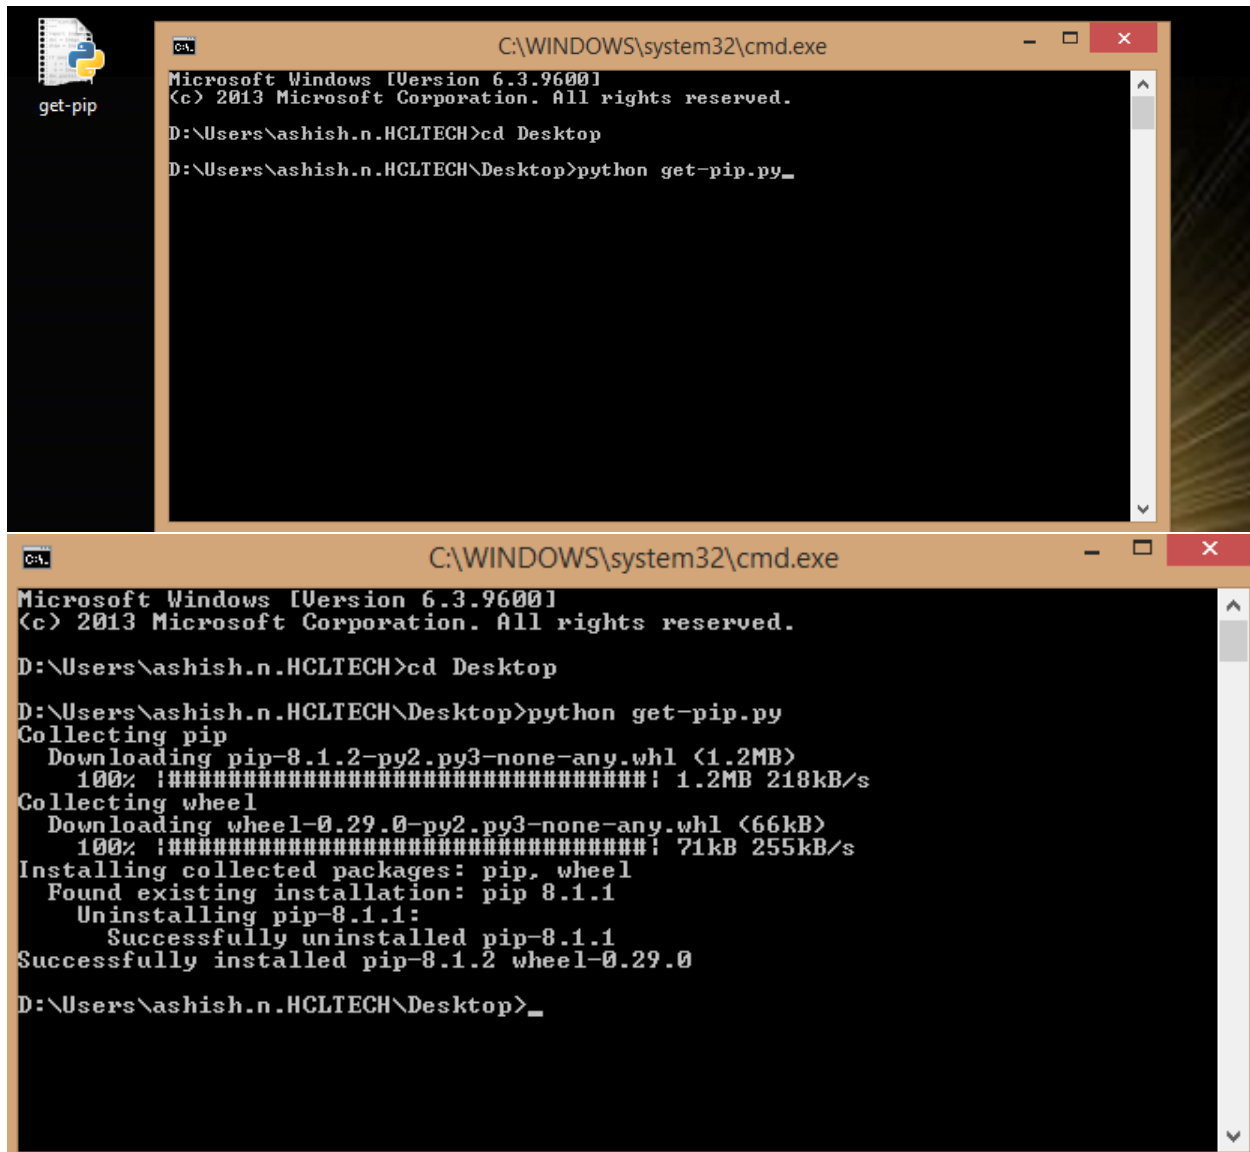

PIP: (The recommended tool for installing Python packages)

* The system should have Python already installed

- Go to link <https://pip.pypa.io/en/stable/installing/> and download **get-pip.py** by right clicking and save link as.

* Please ensure it has to be a python file (*.py)

- Go to command prompt and run the python file.
